

Targeting Maths PROBLEM SOLVING

Class Set ADOPTION OFFER

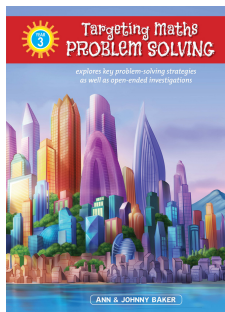

In the real world, mathematics is used to reason, plan and solve problems. But for many people, problem solving remains difficult and a mystery. This can change if the processes and strategies for solving problems are made explicit and are taught well. **Targeting Maths Problem Solving** has been designed to help students become confident problem solvers who develop a deep understanding of mathematics through reasoning and mathematical thinking.

The maths problem-solving strategies explored in this series are:

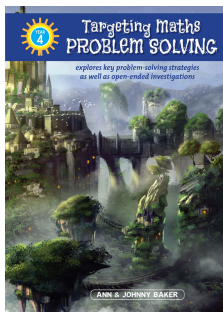

- Understand and draw the problem
- Identify the steps and choose an operation
- Make a model and use Guess, Check and Improve
- Spot and use pattern
- Make an organized list and work systematically
- Draw a picture or diagram
- Draw a table
- Work backwards and try a simpler case
- Logical Reasoning

Every unit has an open-ended investigation to encourage students to think beyond right-answers only and review questions to check that they can apply the strategy in new contexts.

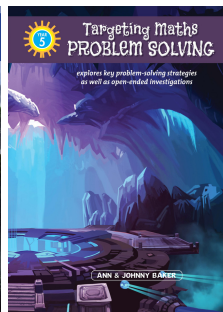

Answers are at the back of the book.
